AI IMPACT ON JOBS DATA ANALYSIS

POWER BI PROJECT BY : BHIVANSHU SHRIVASTAVA

PROJECT OVERVIEW

The **AI Impact on Jobs 2030 Dashboard** analyzes how Artificial Intelligence is expected to affect industries, employees, salaries, job growth, automation levels, and future workforce demand. The dashboard helps stakeholders understand workforce trends, identify high-risk jobs, evaluate upskilling requirements, and make data-driven workforce planning decisions.

Objectives

- Analyze AI adoption across industries.
- Identify jobs with high automation risk.
- Measure future job demand.
- Evaluate employee satisfaction and performance.
- Track upskilling requirements.
- Understand salary and workforce trends.

DATASET AND DATA MODELLING

KEY FIELDS

Category	Columns
Employee Information	Employee_ID, Job_Title, Industry
Demographics	Country, Education_Level
Experience	Years_Experience
Performance	Performance_Index, Job_Satisfaction
Salary	Average Annual Salary
AI Metrics	AI Risk Category, AI Adoption Level
Future Trends	Future Demand Category, Job Growth Rate
Company Details	Company Size
Automation	Automation Level

DATA CLEANING PERFORMED POWER QUERY TRANSFORMATIONS

- REMOVED DUPLICATE RECORDS.
- HANDLED MISSING/NULL VALUES.
- CORRECTED DATA TYPES.
- STANDARDIZED INDUSTRY NAMES.
- CONVERTED SALARY VALUES INTO NUMERIC FORMAT.
- CREATED CATEGORICAL GROUPS FOR AI RISK.
- REMOVED UNNECESSARY COLUMNS.

Data Modelling

- Employee_ID
- Salary
- AI Risk Score
- Future Demand Score
- Performance Metrics
- Experience

Dimension Tables

- Industry
- Country
- Education Level
- Company Size
- Automation Level

Relationships

- One-to-Many Relationships
- Star Schema Design
- Optimized for faster report performance

KPIS

KPI	Value
Total Employees	299
High Risk Employees	91
Average Satisfaction	2.98
Upskilling Employees	152
Average Future Demand	61.32%
Average Salary	\$122.36K
Average Performance	3.50
Average AI Risk	51.18%

DASHBOARD

Executive Summary Dashboard

Visuals Used

- KPI Cards
- Industry vs AI Risk Bar Chart
- Hiring Trend Donut Chart
- Automation Level Donut Chart
- Education Level vs Salary Column Chart
- Interactive Slicers

AI Impact Analysis Dashboard

Visuals Used

- AI Risk vs Future Demand Scatter Plot
- Upskilling Required Donut Chart
- Projected Job Growth by Industry
- Company Size vs AI Tool Usage Clustered Column Chart

Workforce Analysis Dashboard

Visuals Used

- Education vs Salary Analysis
- Industry Satisfaction Comparison
- Experience vs Salary Scatter Plot
- Country vs Demand Map
- Dynamic Filters

KEY INSIGHTS

- **299 employees** analyzed across multiple industries.
- **91 employees** are at high risk of AI-driven job disruption.
- **Average AI Risk: 51.18%**, indicating moderate automation exposure.
- **Average Future Demand: 61.32%**, showing strong future job opportunities.
- **152 employees** require upskilling to remain competitive.
- **Technology and Government** sectors show higher AI risk levels.
- **Finance, Government, and Technology** industries are expected to experience strong job growth.
- Employees with **higher education and experience** generally earn higher salaries.
- **Enterprise companies** have the highest AI tool adoption rates.
- AI is **transforming job roles rather than completely replacing jobs**, making continuous learning essential.

LEARNING AND CONCLUSIONS

Learning

- Learned **Power Query** for data cleaning and transformation.
- Built **data models and relationships** using a star schema.
- Created **DAX measures and KPIs** for business analysis.
- Designed **interactive dashboards** with filters and visualizations.
- Improved **data storytelling and analytical skills using Power BI**.

Conclusion

- AI is significantly impacting industries and job roles.
- Many employees need **upskilling** to stay relevant in the future workforce.
- Despite higher automation risk, several industries still show strong **future job demand**.
- Organizations that invest in AI adoption and employee development will be better prepared for future growth.
